Vinyl Graphics Care and Maintenance

We use quality 3M vinyl and laminate for the best performance and results every time. Because we care about your image almost as much as you do.

Things to do / not do, to care for your vehicle graphics

- Never use high pressure power wash to clean your vehicle. only hand wash when needed.
- Do not use wipers on window perf material, it will diminish the life span of the image and vinyl dramatically. When needed, wash with a soft bristle brush to remove the dirt in the holes and rinse gently.
- Avoid wax on the graphics or around the edges. The graphics have a clear overlamine that does not require any coatings.
- Avoid rubbing vinyl on the edges where it is most vulnerable. Constant rubbing and scratching will reduce the life span.
- Don't allow fuel to remain on vinyl graphics for extended periods of time. Wipe off immediately.

If you notice any areas of the vinyl lifting, contact us for recommendations
